

Use-Case Flow Specification: Handle Incident Alert & Escalation

Goal:

To receive a monitoring alert, identify and notify the active on-call engineer, and escalate the incident to the secondary engineer if the alert is not acknowledged within 5 minutes.

2. Preconditions

1. The on-call rotation schedule is configured and available.
 2. At least one primary and secondary on-call engineer are assigned.
 3. The monitoring system is connected to the incident management system.
 4. Notification channels such as SMS, phone, or email are configured.
-

3. Postconditions

Success Postcondition

- The incident is acknowledged by an on-call engineer and its status is updated.
- The incident and acknowledgement details are recorded.

Failure Postcondition

- If the primary engineer does not acknowledge the incident within 5 minutes, the incident is escalated to the secondary on-call engineer.
 - The escalation event is recorded in the incident history.
-

4. Main Success Scenario

1. The Monitoring System detects an incident and sends an alert to the system.
2. The system receives and records the incident alert.
3. The system checks the current on-call rotation schedule.
4. The system identifies the active primary on-call engineer.
5. The system assigns the incident to the primary on-call engineer.
6. The system sends a notification through the configured channel such as SMS, phone, or email.
7. The On-Call Engineer receives the notification and acknowledges the incident.
8. The system updates the incident status to Acknowledged.
9. The system records the acknowledgement and incident details.
10. The Incident Commander can view the incident status and escalation history.

11. The incident proceeds to resolution and can later be included in the post-mortem record.
-

5. Alternate Flow

AF-001: Primary Engineer Does Not Acknowledge

1. The system sends the incident notification to the primary On-Call Engineer.
 2. The system starts a 5-minute acknowledgement timer.
 3. The primary engineer does not acknowledge the incident within 5 minutes.
 4. The system automatically triggers the escalation process.
 5. The system identifies the secondary On-Call Engineer from the rotation schedule.
 6. The system sends the incident notification to the secondary engineer.
 7. The escalation event is recorded in the incident history.
 8. The secondary engineer acknowledges the incident.
 9. The system updates the incident status to Acknowledged and records the acknowledgement.
